Virtualq
Product Owner
Berlin, DE

Dear Hiring Manager,

I am a people-focused software engineer with a proven track record in driving both technical and organizational facets of ambitious projects.

With three years of team lead experience, a robust technical background and passion for bold and dynamic workplaces, I am thrilled to apply for the open position of Product Owner at Virtualq.

At Summit Reforestation, I led timely and budget-compliant projects, securing repeat clients and achieving over 50% crew retention season-to-season. My experience in diverse team management and logistics, though unconventional, equips me uniquely for success in this multi-stakeholder role.

My methodical focus on taking a holistic approach to problems and robust experience in interviewing, technical writing and presenting skills ensures that I can curate and uphold a streamlined and metric driven product strategy. I successfully applied these skills as a Head Training Coordinator where I successfully developed and introduced a modular training program to expedite the onboarding process and reduce repetitive-use injuries for the company's 450+ employees.

Alongside my commitment to soft skills, I am **proficient in React, TypeScript and Python**, and experienced with SQL databases, AWS and Serverless infrastructure. I've used these tools to **contribute to full stack features of enterprise SaaS solutions** for Terris Earth Intelligence and built a suite of projects, some of which are showcased at www.olee.dev.

Eiusmod aliquip pariatur ad cillum id cillum ut cupidatat commodo reprehenderit in excepteur. Sint esse mollit id voluptate ad qui exercitation. Amet non ipsum irure nulla Lorem. Nostrud cillum irure qui officia sit irure id. Fugiat ullamco mollit consectetur exercitation laborum qui sint est commodo ea sunt sit.

Thank you for considering my application. I am eager to delve deeper into how my skills and experiences can further Virtualq's objectives.

Kind Regards,

Owen Lee
